

Data Engineer – Farmvet Systems

Following our recent worldwide alliance with Vetoquinol, Farmvet Systems Ltd is now going global, with a strong global partner. We are currently recruiting a Data Engineer to join our team. The successful candidate will have strong programming experience and will be responsible for delivering solutions within the core asset of our business where we acquire, transform and analyse data for our clients in the veterinary and animal health sector.

Reporting to our Product Development Manager and working in close collaboration with our IT Department, your missions / main responsibilities will be:

- Design data acquisition, transformation and analytical solutions from initial data assessment to development and deployment of models
- Work closely with our business team, to on-board new customers through existing models and making changes where required to improve data quality within each customer's specific environment
- Create stored procedures, functions and triggers for various business requirements
- Write complex queries with optimal performance as per the business requirements
- Coordinate with the Product Development Manager, team members and other stakeholders (including clients) to meet business objectives
- Evaluate SQL - at both a personal and team level - to ensure it meets industry standards, is valid and is compatible with browsers, devices, or operating systems
- Develop test routines and schedules to ensure test cases mimic external interfaces and address all browser and device types.

The successful candidate will have experience and knowledge of the following technologies:

- SQL (MS SQL Server 2012 onwards) creating SQL queries and stored procedures
- Database indexing and performance tuning
- Integrating new datasets into data warehouse
- Extensive working exposure in OLTP environments
- Data analysis and trending
- Maintaining coding standards with version history
- Data warehousing: Relational database and data warehousing knowledge
- Other RDBMS: e.g. MySQL, PostgreSQL, MSAccess

If you can apply yourself with creativity and intellectual rigour, have exceptional hands-on problem solving skills and can adapt rapidly to changing circumstances, you'll find there are significant opportunities to progress.

On offer is a salary of £32,000 - £40,000 per annum depending on experience + benefits, working as part of a small team based near Cookstown / Magherafelt. Flexible working and some working from home is also offered.

To apply for this role please send an up-to-date CV to the following email: jobs@farmvetsystems.com (Please use the Subject header: "Application for Data Engineer role")
